

LK-7000

CCD Type

Small sized Tilt Sensor

LK-7000

Just like palm-sized Tilt Sensor

- It is sized 40×50×60 to be available to install in limited space of equipments.
- Highly precise measurement is available by the built-in LD and CCD camera.

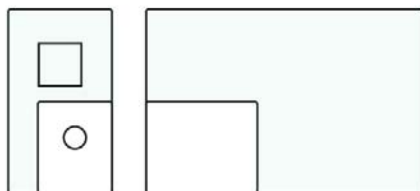

Setting sample

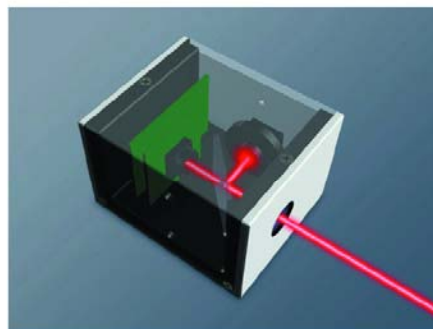

Small and light weight

It is about 1/7 size compared with Standard Type Tilt Sensor, Available to install in stages or in robot-hands.

Built-in LD and CCD camera

Easy to search a measuring spot by 645nm red visible LD. Despite small sized, it is an autocollimator with CCD camera as highly precise as conventional models.

Easy connection

Wiring to Small sized Tilt Sensor is just one cable. It does not prevent the installation.
